Juniz Kyle Sarmiento

Backend-focused Full-Stack Developer

Apalit, Pampanga, Philippines (GMT+8) · junizkylesarmiento@gmail.com · github.com/kkyleee23 · devbykyle.vercel.app

I build the parts that keep an app running. Backend is where I am strongest: data models, APIs, and the part nobody sees. I learned the front end so I could ship a whole thing myself instead of handing half of it off. Four products shipped end to end in 2026, self-taught since 2024, all outside class hours.

SHIPPED PROJECTS

Planora **Live · planora-official.vercel.app**
A free task manager for Android and web with a built-in AI assistant called Nora. Tasks, notes and goals in one place. No accounts, no ads, and it works with the network off. Under 5 MB, no build step.
HTML, CSS, JavaScript, Vercel

PrintScr **Live · printscr.vercel.app**
Upload a PDF, a deck, or a photo of your notes and get back a summary, the key terms, flashcards and a practice quiz, built only from what is in the file. Parsing runs on the server before anything reaches a model; API keys stay server-side.
Node.js, Express, Groq, Gemini, Vercel

Studs **Live · studs-web.vercel.app**
Student and teacher management that runs outside the LMS a school already has. Attendance, activities and scores in one place. Eight screens on a repository-per-entity data layer with row-level security on every table.
Vite, JavaScript, Supabase, PostgreSQL

Agos **Building, v1.0.1**
Crowdsourced hazard reporting for the Philippines. Drop a pin, tag it flood, traffic or landslide, add a photo or a note, and everyone else on the map sees it.
Flutter, Dart, Geolocation

STACK

Shipped with	HTML, CSS, JavaScript, TypeScript, Node.js, Express, PostgreSQL, Supabase, Vercel, Git and GitHub. Mobile: Flutter, Dart, Capacitor, Android Studio. Python for command-line tools. LLM integration through provider APIs (Groq, Gemini, OpenAI, Claude, Ollama).
Studied, not yet shipped	React, Next.js, Vue, Tailwind, PHP, Laravel, FastAPI, MySQL, MongoDB, Firebase, GitHub Actions, Docker, Postman, Figma, Java, C#, C++.
How I work	Start in plain HTML, CSS and JavaScript. Get it working, then find where a framework would actually help, and add one only where it earns the weight it costs.

EDUCATION

2025 to present	**STI College Malolos** Senior high, ITMAWD strand (Information Technology in Mobile App and Web Development), Grade 12.
2024 to 2025	**AMA Basic Education, ACLC Apalit** Junior high, Grade 10. Started teaching myself to build apps and games.
2021 to 2024	**La Verdad Christian School** Junior high, Grades 7 to 9.

AVAILABILITY

Open to internships, junior roles and freelance. Weekdays from 2 PM and all day Sunday. Remote, or hybrid around Pampanga and Metro Manila. One capstone project at a time, so the work stays good.

Updated November 2026. The live version of this page, with project screenshots and recent commits, is at devbykyle.vercel.app.
